

Seeking Volunteers with Down syndrome for a Neuroimaging and EEG Research Study

We are conducting a research study at the Massachusetts General Hospital to examine the effectiveness of transcranial photobiomodulation (tPBM) on improving language, memory and attention in adults with Down syndrome (ages 18-30).

The study consists of 1 screening visit, approximately 3 study visits and 18 treatment sessions (3/week for 6 weeks). Study visits include neuropsychological testing, EEG testing, and MRI scans.

You will be compensated up to \$1,245 for participating and a stipend of \$525 for cost of transportation. Caregivers will receive a stipend of \$525.

If you are interested in participating, **please contact us at 617-724-4539.**
